TC Soft Cloud –

Simple and reliable
documentation of all your HACCP data

www.temp-rite.eu

We serve the solution

More and more HACCP requirements are constantly emerging in all customer segments. With our TC Soft Cloud, we are offering an innovative monitoring and regulating instrument that will enable you to keep a tight control on compliance with, and documentation of, all your HACCP requirements - simply, reliably and methodically.

See for yourself the advantages of our TC Soft Cloud solution.

temp-rite

There are plenty of good reasons for using the TC Soft Cloud. Here are the main advantages:

- # Location-independent access to every* cart/trolley in your fleet
- # No restrictions on the hardware or software you use. Access to data is obtained via a standard browser
- # The TC Soft Cloud is compatible with desktop PCs, tablets and smartphones
- # The intuitive user interface guarantees maximum acceptance on the part of users
- # High degree of data reliability and security compared with local-workplace solutions
- # Remote diagnostics facilitate support process
- # Monitoring in real time – deviations from predefined procedures are flagged without delay

* Temp-Classic Pro, Temp-Contact, Dock-Rite Pro and Temp-Serve

How the TC Soft Cloud functions

Each system sends data via a WLAN or a LAN connection direct to the Cloud. A gateway software package is required for the exchange of data between the carts/trolleys and the Cloud.

Available for the following systems:	Data transfer via USB/WIFI/LAN	Gateway software	HACCP TC Soft Cloud software	Access
Temp-Classic Pro Temp-Contact Dock-Rite Pro Temp-Serve	LAN (dependent on the model)	The software is installed in an internet-capable work-station. This is required for LAN- and WLAN-based transfer of data to the Cloud		 Customer's PC, tablet or smartphone

How the TC Soft Cloud is used

- The TC Soft Cloud package is licensed software. A licence, which is valid for 2 years, is required for each unit operated by the customer
- Each customer receives a three-level access-rights system for the use of the software. The three levels (customer – manager – user) define given sets of rights. Each person sees only what is relevant to his/her duties and activities.
- Login is by means of a user name and a password entered via a browser
- All the carts/trolleys registered in the Cloud are displayed on the dashboard. An intuitive navigation-and-software interface guarantees high acceptance rates with users.

Temp-Classic Pro

via WLAN module	available
via LAN module	available
via USB stick	available

Temp-Contact

via WLAN module	in process
via LAN module	in process
via USB stick	-

Dock-Rite Pro

via WLAN module	available
via LAN module	available
via USB stick	-

Temp-Serve

via WLAN module	available
via LAN module	available
via USB stick	-

Application, test and contract-signing phase

Application analysis

- Tests to establish which systems the TC Soft Cloud can be used with (pre-existing systems, new systems)
- Systems already being used can be retrofitted with the necessary modules (testing is in this case essential)

Technical checks

- Checks to establish that all the technical pre-requirements for use of the TC Soft Cloud have been met
- We recommend the involvement of, and direct communication between, temp-rite's and the customer's own IT specialists

Signing of the contract

- The use of the TC Soft Cloud software package is subject to a licence agreement. For reasons connected with data-protection and privacy law, this agreement will involve the drawing up of a contract covering:
  - supply of the software
  - data protection and an end user licence agreement (EULA)
  - licensing of the cart/trolley for 2 years

Implementation phase

Granting of the licence, adding systems to the cloud, customer training

- The assignment of contracts to carts/trolleys in the customer's fleet is undertaken by temp-rite
- temp-rite sets up the customer's account and provides training for selected managers (key users)
- Easy-to-follow instructional videos explain all of the main system functions. These how-to videos remain available for reference and for post-implementation instruction of further employees
